

## .....Active VMware Windows Boot Manu by MZ.....

1. Power off the windows.
2. Go to the Virtual Machine located file.
3. open "" .vmx "" file or Type "" VMware virtual machine configuration "" in "" Notepad++ ""
4. write "" bios.bootdelay=7000 "" before second line making it as 2nd line.

like as....example..

```
((  
    1      .encoding = "windows-1252"  
    2      bios.bootdelay=7000  
    3      config.version = "8"  
    4      virtualHW.version = "12"
```

```
)))
```
